These concepts are fairly new in science. Up to about 20-30 years ago it was still believed (and in fact this belief can still be encountered today) that certain states of matter - such as gases, liquids, and amorphous solids - were characterized by a totally disordered distribution of the constituent particles, whilst crystals, by contrast, exhibited perfectly ordered lattices. According to the present view, on the other hand, order and disorder often coexist inseparably from each other, though there are admittedly many cases in which "order" or "disorder" does describe quite accurately the actual state of affairs. Symptoms of disorder have...
